RE: Cap X2020 Route Permit for Construction of a High Voltage Transmission line between Monticello Substation and the new Quarry Substation west of St. Cloud by Xcel Energy and Great River Energy

Dear Judge Jones Heydinger:

The above referenced HVTL "looks" as though it may very likely be constructed on our property near Enfield, Minnesota. But we are not sure, because of the wide highlighting on the maps indicating the preferred and both alternative paths make it difficult to determine exactly where the line is to be built.

The property we have there is dedicated to wildlife and conservation. We DO NOT want a high voltage line going through our property. There are other possibilities following the old railroad tracks, etc.

We don't want to be alarmists - *perhaps* the final route will NOT go through our farm. But we do want everyone concerned to know that we are totally against this HVTL being built on our property.

Respectfully,

A handwritten signature in black ink, appearing to read 'Marvin & Karen', followed by a stylized circular flourish.
